# ACCELERATOR-FREE NITRILE DISPOSABLES

**4.5 mil Nitrile sulfer and accelerator-free disposable glove designed to help prevent skin reactions.**

Contact dermatitis can be caused by sulfur, accelerators and other chemicals used in the production of many non-latex gloves.

## WHY?

Skin infections account for up to 35% of all occupational diseases, with contact dermatitis accounting for the vast majority. Whether it's an **irritant contact dermatitis** (non-allergic reaction to harsh soaps or solvents) or **allergen contact dermatitis** (type IV hypersensitivity - immune response triggered by an allergen), the end result is the same - the gloves workers wear can have a big impact on their health.

## TRUE VALUE OF THIS GLOVE

- Designed to give workers an option that won't cause irritant or allergic contact dermatitis.
- For use when Latex isn't an option

## KEY MARKETS AND APPLICATIONS

- Chemical Handling & Laboratory

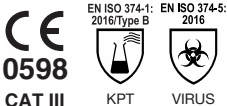

### ACCELERATOR-FREE NITRILE
